

Make DOS Bootable Pen Drive very easily

We need only three important files for DOS Bootable Pen Drive that are (a) IO.SYS (b) MSDOS.SYS both are system files (c) COMMAND.COM this file is interpreter contains all the basic internal command in it. As we are aware that Microsoft has introduced DISK OPERATING SYSTEM (DOS) for Personnel Computer (PC) but after DOS 6.22 Microsoft has introduced another OS that is Windows Operating System. But Windows 3.1 also required DOS to install therefore Microsoft has introduced Windows-98 with built-in DOS as a part of OPERATING SYSTEM. Therefore Windows-98 DOS files create DOS Bootable Pen Drive very easily with help of above mention only three important files. Download bootable files click on Link: - <http://www.areptone.in/dos/98systemfiles.rar> for making bootable pen drive we also need a formatting tool that is included here but hp sub disk storage format tool setup file (HPUSBDisk) can be down lode from internet directly...

Method:-

Download

Io.sys file

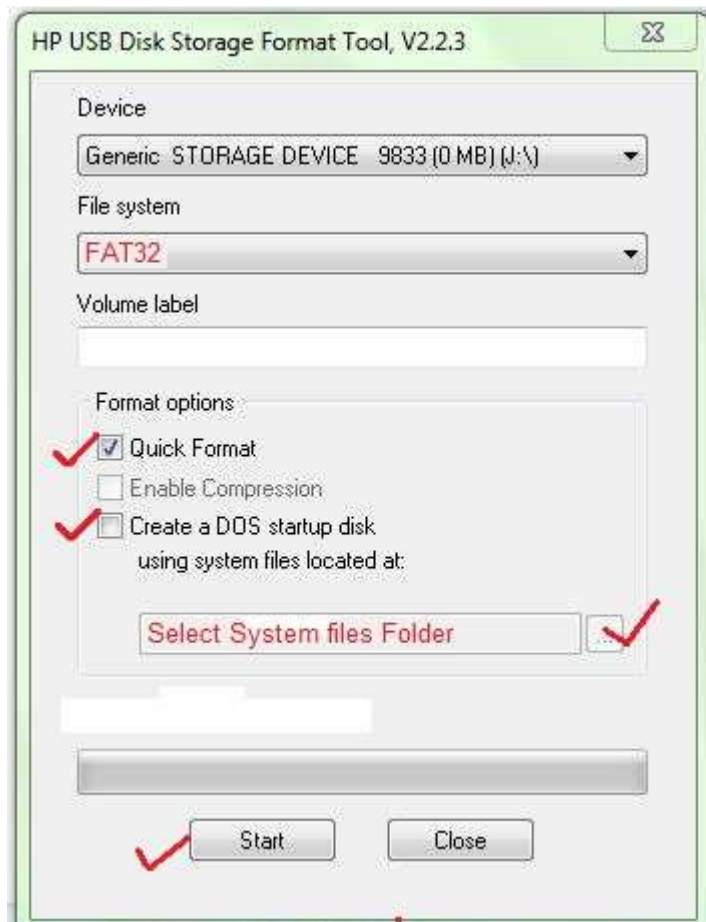

Msdos.sys file

Command .com file of windows98 dos

Hp sub disk storage format tool setup file

First format your Pen Drive with NTFS File system of your PC

Now Run HPUSBDisk format tool file & set menu as following

<http://www.areptone.in/dos/hp.JPG>

Select Command folder then Copy & paste on PenDrive for Running all external commands through Pen Drive

For mouse operation use Mouse.com

Make Autoexec.bat & Config.sys File as per your choice

Now your PEN DRIVE is ready to use

Thanks
