

## HOW TO MAKE AND RESTORE GHOST FILE by Norton Ghost Image

You can restore a ghost file through ghost software installed on bootable pen drive. To make a bootable pen drive you need a pen drive formatting software with system files. Therefore you need the following files (a) **IBMBIO.COM** (System Files) (b) **IBMDOS.COM** (System Files) (c) **COMMAND.com** (for booting from pen drive) (d) **MOUSE.com** (for Mouse operation) (e) **MOUSE.ini** (Mouse configuration file) (f) **GHOST.EXE** (Ghost software) To download all these file for pen drive formatting. The software is (**Norton ghost 11.5 bootable usb**) from internet, click on the following link:-

<http://download2388.mediafire.com/8pzcha70vozg/5c96mceplyvwhn/Format+USB.r>

<http://download2389.mediafire.com/5bka3d70e5tg/42914n0asj6bdx6/Usboot+Norto>

Format Tool USB download directly <http://www.mediafire.com/download/5c9...>

Usboot Norton Ghost download directly <http://www.mediafire.com/download/429...>

### Method & Preparation :-

#### Step-1:- download both files

(a) Format USB

(b) Usboot Norton Ghost

Both files are compressed therefore first of all decompressed both files on you Computer.

#### Step-2:- Prepare pen drive

(a) insert your pen drive on your PC usb port (b) Run (CMD) command as an administrator TYPE DISKPART Then Press ENTER
